1) Hotel Management System

⇒ Software Requirement Specification (SRS) for Hotel Management System

1. Introduction:

1.1 Purpose of this document : The purpose of this document is to outline the requirements and specifications for the development of a Hotel Management System. It will provide a clear understand of the project objectives, scope and deliverables.

1.2 Scope of this Document : This Document Defines overall working and main objectives of the Hotel Management System. it includes a description of the development cost & time required for the project.

1.3 Overview : The HMS is a software solution designed to streamline all the hotel operations including reservation management, guest check in check out, Room assignment, billing and Reporting.

2. General Description

The Hotel management System will cater to the needs of hotel staff and management providing features such as room booking, guest profiles, inventory Management and financial reporting.

3. Functional Requirements.

3.1 Reservation Management : Allows the users to make the room reservations online or through the front desk.
• Generates reservation confirmation guests and sends notifications to the guest.

3.2 Room Management : Assign Room to the guests based on availability and preference.
• Track Room Status (clean, occupied) in real-time.

3.3 Guest Management : Maintain Guest profiles with personal information, preference & booking history.

3.4 Billing and Invoicing : Generate accurate bills for room charges, additional services & taxes.
• Accept various payment methods and generate invoices for corporate clients.

4. Interface Requirements

4.1 User Interface : Intative and user-friendly interface for hotel staff and guests.
• Accessible via web browsers, mobile devices and desktops applications.

4.2 Integration Interface : Integration with Payment gateways for secure transaction.
• Integration with third-party booking platform for seamless reservation management.

5. Performance Requirement.

5.1 Response Time: The System should be within 2 Seconds.

5.2 Scalability: Handle a minimum of 100 concurrent users during peak hours.

5.3 Data Integrity: Ensure data consistency and accuracy across all modules.

6. Design Constraints

6.1 Hardware limitations: The system should be compatible with standard hotel hardware (Computers, printers, POS terminals).

6.2 Software Dependencies: Utilize a relational database management system (e.g MySQL) for data storage.
• Use programming languages and frameworks conducive to UML modeling (e.g Java, Spring Boot)

7. Non Functional Attributes

7.1 Security: Implement robust authentication and authorization mechanisms to protect sensitive data.

7.2 Reliability: Ensure high availability and fault tolerance to minimize system downtime.

7.3 Scalability: Design the system to accomodate future growth and Expansion.

7.4 Portability : Support multiple platform and devices for users accessibility.

7.5 Usability : The system shall have user-friendly interface with clear navigation.

7.6 Reusability : The system shall use modular code design to facilitate future enhancement & and maintainance.

7.7 Compatibility : The system shall be compatible with common web browsers (chrome, firefox).

7.8 Data Integrity : The system shall ensure accuracy and consistent data storage and retrieval.

8. Preliminary Schedule and Budget

The Development of the HMS is estimated to take 6 months with a budget of $100000. This includes project planning, development, testing and deployment phases.
