02 Credit Card Processing System.

Software Requirement Specification for Credit Card Processing System.

1. Introduction.

1.1 Purpose of this Document

The purpose of this Document is to outline the requirements and Specifications for the Development of a Credit Card processing system it will provide a clear understanding of project objectives, scope and deliverables.

1.2 Scope of this Document.

This Document defines the overall working and main objectives of the Credit card processing system. It includes the processing of credit card transaction, customer/information, payment verification and trasaction management

1.3 Overview

The Credit Card processing system is a Software Solution designed to streamline credit card transaction including card validation, payment authorization, transaction processing, billing & reporting.

2. General Description

The Credit card processing system will cater to the needs of customers, merchants and administrators by providing featares such as card varification, transaction processing, transaction history & financial reporting

3. Functional Requirements

3.1 Card Management.

- Allow users to register and manage credit card information.
- Validate card details before processing transactions.

3.2 Transaction Processing

- Process Credit card payment Securely
- Generate transaction confirmations and reciepts.

3.3 Payment Authorization

- Varify card validity and available credit
- Approve or reject transaction based on authorization reports results.

3.4 Transaction Management

- Maintain transaction history.
- Allow authorized users to generate transaction reports

4. Interface Requirements

4.1 User Interface

- Provide an intuitive and users-friendly interface
- Allow customers and merchants to easily perform transaction.

4.2 Integration Interface.

- Integrate with banking and payment gat systems.
- Support Secure communication with financial institutions.

5. Performance Requirements

5.1 Response Time.
. The system should respond to transaction request within 2 Seconds.

5.2 Scalability
. Handle a minimum of 1000 concurrent transaction during peak hours

5.3 Data Integrity
. Ensure transaction information is stored accurately and consistently.

6. Design Constraints

6.1 Hardware Limitations
. The System should be compatible with standard computer pos terminals and card readers.

6.2 Software Dependencies
. utilize a relational database management system such as MySQL
. Use Suitable programming languages and frameworks for Secure application development

7. Non functional Attributes

7.1 Security.
. Implement Strong authentications and authorizati mechanisms.
. Protect Sensitive Card and customer info

7.2 Reliability
- Ensure high availability & reliable transaction processing

7.3 Scalability
- Design the system to Support increasing transaction volumes.

7.4 Portability
- Supports Multiple platforms & devices

7.5 Usability
- Provide a Simple and user friendly interface

7.6 Reusability
- Use modular components to support future enhancement.

7.7 Compatability
- The System should be compatable with common used web browsers and payment terminals.

7.8 Data Integrity
- Ensure accurate and consistent transaction storage and retrived

9. Priliminary Schedule and Budget

The development of the Credit and processing system is estimated to take 6 moths with the budget of $100,000 this includes planning, development, testing & deployment.
