05 Passport Automation System.

Software requirement Specification (SRS) for passport automation System.

1. Introduction.

1.1 Passpose of this Document.

To outline the requirements and specifications for the development of a passport automation system. it will provide a clear understanding of the project objectives scope & deliverables.

1.2 Scope of this Document.

This Document defines the overall working and main objectives of the passport automation system. it includes passport application, document verification appointment Scheduling, application tracking and passport issuance.

1.3 Overview

The passport automation system is a software solution designed to streamline passport-related services, including online application, submission, document verification, appointment management application processing & status tracking.

2. General Description

The passport automation System will cater to the needs of applicants and passport office staff by providing features such as online application. applicant profiles, documents management.

appointment Scheduling application tracking & tracking.

3. Functional Requirements.

3.1 Application Management
- Allow applicants to submit passport applications online.
- Maintain applicant information and application history.

3.2 Document Management
- Allow applicants to upload required documents.
- Verify and maintain submitted documents.

3.3 Application Tracking.
- Allow applicants to track their passport application status.
- Generate notifications regarding application progress.

3.4 Appointment Management
- Allow applicants to Schedule appointments.
- Verify and maintain submitted documents.

4. Interface Requirements.

4.1 User Interface.
- Provide and intuitive and user friendly interface for applicants & passport office staff.
- Allow applicants to easily submit application and track their status.

4.2 Integration Interface

. Integrated with secure payment gateways for application fees.

. Integrate with government database & verification systems where required.

5. Performance Requirements

5.1 Response Time

The system should respond to users actions within 2 seconds.

5.2 Scalability

Handle a minimum of 1000 concurrent users during peak hours.

5.3 Data Integrity

Ensure accuracy and consistency of applicant and passport information.

6. Design Constraints

6.1 Hardware limitations

The System should be compatible with standard computers, printers, scanners & biometric devices.

6.2 Software Dependencies

. Utilize a relational Database Management System such as MySQL

. Use programming languages and frameworks suitable for secure web application development.

7. Non - functional Attributes

7.1 Security
Implement robust authentication and authorization mechanism.

7.2 Reliability
Ensure high availability & reliable application processing.

7.3 Scalability
Design the system to accommodate increasing no. of applicants.

7.4 Portability
Support multiple platform & devices.

7.5 Usability
Provide a Simple & users friendly interface with clean navigation.

7.6 Compatibility
Support common web browsers and passport - office hardware.

7.7 Reusability.
Use modular code design to facilitate future enhancement & maintainance.

7.8 Data Integrity
Ensure accurate & consistent storage & retrieval of applicant information.

8. Preliminary Schedule and Budget.

The Development of the passport automation system is estimated to take 6 months with a budget of $ 150000 this includes planning, development, testing & deployment.

planning = 10000
development = 50000
testing = 30000
deployment = 45000
