03 Library Management System

Software Requirement Specification for Library Management System

1. Introduction :

1.1. Purpose of this Document

The purpose of this document is to outline the requirement and specifications for the development of a Library Management system. It will provide a clear understanding of the project objective, Scope and deliverables.

1.2 Scope of this Document

The Document Scope of library management System it defines overall working and main objective of the Library Management system. It includes the managing library, description of the development cost & time required for the project.

1.3 Overview

The library management system is a Software Solution designed to streamline all the operations including student check in, check out, book management, billing & reporting.

2. General Description.

The ~~Hotel~~ library Management system will cater to the needs of study staff and management providing feature such as booking, financial reporting, validation, authorization.

3. Functional Requirement

3.1 Books Management

Allows the Users to Make the book available anytime.

3.2 Billing and Invoicing

Generate accurate bills for the book charges, and additional services.

3.3 Reservation Management

Allows the user to make make the books reservations online or through the front desk.

4. Interface Requirements

4.1 User Interface

- provide an intitive and user-friendly interface
- Accessible via webbrowser, mobile devices and desktops applications

4.2 Integration Interface

- Integration with payment for Secure transcation
- Support Seccure Communication with the instructions.

5. Performance Requirement

5.1 Response time

The System Should respond within a Seconds

5.2 Scalability

Handle the minimum of ten concurrent user during peak hours.

5.3 Data Integrity

- Ensure data consistency and accuracy across all models.
- Ensure accurate and consistent book, member and transaction records.

6. Design Constraints.

6.1 Hardware limitations

The system should be compatible with standard computers, printers and barcode scanners.

6.2 Software dependencies

- Utilize a relational database management system such as MySQL
- Use suitable programming languages and frameworks for development.

7. Non-Functional Attributes

7.1 Security

Implement authentication & authorization to protect member information.

7.2 Reliability

Ensure reliable access to library records and minimize system downtime.

7.3 Scalability

Support future expansion of books members and library branches.

Date / /

7.4 Portability
Support multiple platforms & devices.

7.5 Usability
Provide clear navigation and a user friendly interface.

7.6 Reusability
Use modular code design for future enhancement.

7.7 Compatibility
Support common web browsers and library hardwares.

7.8 Data Integrity
Ensure accurate storage and retrieval of library

8. Preliminary Schedule and Budget
The development of a library managment system is estimated to take 6 moths with a budget of $1,00,000 this includes planning, development, testing and deployment.

planning = 10000
development = 50000
testing = 30000
deployment = 10000
